PE OS — Complete Product Feature Guide

Product: AI-powered CRM for private equity / M&A deal management ("PE OS") **Audience:** Onboarding, sales/demo, hiring, and internal reference **Prepared for:** Ganesh · **Date:** 2026-07-13 **Source of truth:** `apps/web-next` (Next.js frontend) + `apps/api` (Express API), current `main`-tracking state.

This guide covers, for every feature:

- 1. **What it is** (Complete Product Feature)
- 2. **Step-by-step navigation** (how a user actually gets to and uses it)
- 3. `VIDEO` **Loom flag** — whether a recorded walkthrough is recommended
- 4. **Use cases** — realistic PE/M&A scenarios

Legend

Badge	Meaning
<code>AI</code>	AI-powered feature (LLM / agent)
<code>VIDEO</code>	Loom video recommended — multi-step or "show-don't-tell" flow worth a recorded walkthrough
<code>ROLE</code>	Role-gated — requires a minimum role (Analyst → Associate → Admin)
<code>PARTIAL</code>	Partial / Coming soon — built but stubbed, hidden, or API-only in current UI

Roles (stored → UI label): `VIEWER` = **Analyst** · `MEMBER` = **Associate** · `ADMIN` = **Admin** (some screens also honor Partner/Principal).
Primary sidebar navigation: Dashboard · Deals · Data Room · CRM · Admin · **AI Reports** (Memo Builder) — plus footer *Invite Team* · *Settings* · *Feedback*.

Part 1 — Complete Feature Inventory

A. Getting Started (Auth & Onboarding)

#	Feature	AI	Loom	Route
A1	Sign Up (create firm workspace)			<code>/signup</code>
A2	Login (+ TOTP MFA challenge)			<code>/login</code>
A3	Verify Email (link / OTP / resend)			<code>/verify-email</code>
A4	Forgot / Reset Password			<code>/forgot-password</code> , <code>/reset-password</code>
A5	Accept Invitation (external join)			<code>/accept-invite</code>
A6	Guided Onboarding (3 tasks)	<code>AI</code>	<code>VIDEO</code>	<code>/onboarding</code>
A7	Onboarding Checklist (dashboard nudge)			<code>/dashboard</code>

B. Dashboard

#	Feature	AI	Loom	Route
B1	Customizable widget dashboard		VIDEO	/dashboard
B2	Pipeline Stats / Active Priorities / Portfolio Allocation			/dashboard
B3	AI Deal Signals ("Scan Signals")	AI	VIDEO	/dashboard
B4	My Tasks / Upcoming Deadlines / This Week			/dashboard
B5	Watchlist (track pre-pipeline targets)			/dashboard
B6	Market Sentiment PARTIAL	AI		/dashboard

C. Deals & Pipeline

#	Feature	AI	Loom	Route
C1	Deal Pipeline (List + Kanban)		VIDEO	/deals
C2	Bulk actions (stage / export / pass / delete)			/deals
C3	Deal Intake — AI create/enrich	AI	VIDEO	modal / /deal-intake
C4	Deal Detail workspace			/deals/[id]
C5	Stage lifecycle + Edit / Delete deal			/deals/[id]
C6	Deal Team management	ROLE		/deals/[id]

D. Deal Workspace — AI Analysis

#	Feature	AI	Loom	Route
D1	Financial Statements (AI extraction, 3-statement)	AI	VIDEO	/deals/[id]
D2	Validation Flags + Conflict Resolution			/deals/[id]
D3	AI Financial Analysis (QoE, LBO, ratios)	AI	VIDEO	/deals/[id]
D4	AI Narrative Insights + Benchmarking	AI	VIDEO	/deals/[id]
D5	Deal Assistant AI (chat agent w/ tools)	AI	VIDEO	/deals/[id]

E. Data Room / VDR

#	Feature	AI	Loom	Route
E1	Data Rooms overview + Create data room	ROLE		/data-room
E2	Deal data room (3-pane workspace)		VIDEO	/data-room/[dealId]
E3	Upload documents (+ auto-merge financials)	AI	VIDEO	/data-room/[dealId]
E4	Folder organization (DD structure)			/data-room/[dealId]
E5	File table (open, rename, delete, re-analyze)	AI		/data-room/[dealId]
E6	Link document to another deal			/data-room/[dealId]
E7	Extract financials from a document	AI		/data-room/[dealId]
E8	AI Folder Insights (completeness, red flags)	AI	VIDEO	/data-room/[dealId]
E9	Request missing document			/data-room/[dealId]
E10	Generate full folder report (Markdown)			/data-room/[dealId]
E11	Search + smart filters			/data-room/[dealId]

F. AI Reports — Memo Builder & Templates

#	Feature	AI	Loom	Route
F1	Create memo (deal-bound, template-seeded)	ROLE		/memo-builder
F2	Generate All sections	AI	VIDEO	/memo-builder
F3	Per-section AI generate / regenerate	AI		/memo-builder
F4	Section management (add/edit/reorder)			/memo-builder
F5	AI Analyst chat (rewrite / tables / charts)	AI	VIDEO	/memo-builder
F6	Export (PDF / Markdown / Clipboard / Share)			/memo-builder
F7	Templates library + editor		VIDEO	/templates

G. CRM (Contacts)

#	Feature	AI	Loom	Route
G1	Contacts directory (list/grid, search, filter)			/contacts
G2	Add / Edit contact (+ background AI enrich)	AI		/contacts
G3	Relationship Score & Network insights			/contacts
G4	Contact detail panel			/contacts
G5	Interaction logging (notes/calls/meetings)			/contacts
G6	Connections / relationship mapping		VIDEO	/contacts
G7	Deal linking (role on a deal)			/contacts
G8	CSV import / export			/contacts
G9	AI Contact Enrichment agent	AI	VIDEO	background

H. Admin, Team & Settings

#	Feature	AI	Loom	Route
H1	Admin Command Center (stats, tasks, reviews)	ROLE	VIDEO	/admin
H2	Team Activity feed + Audit CSV export	ROLE		/admin
H3	Team & Invitations (single + bulk CSV)	ROLE		/settings
H4	Profile & Notification preferences			/settings
H5	Firm Profile (AI-researched)	AI		/settings
H6	Security: password, MFA, sessions			/settings
H7	Trust posture + Tenant-isolation live test	ROLE	VIDEO	/settings
H8	Require-MFA org policy	ROLE		/settings
H9	AI Usage (personal credits)			/settings
H10	Internal AI usage console PARTIAL			/internal/usage

I. Global / Cross-App

#	Feature	AI	Loom	Route
I1	Command Palette (⌘K)		VIDEO	global
I2	Context-aware AI Assistant	AI	VIDEO	global
I3	Notifications (bell + slide-out center)			global
I4	Portfolio Chat (AI, ask across all deals)	AI	VIDEO	global

Part 2 — Feature Walkthroughs (Navigation + Use Cases)

A. Getting Started (Auth & Onboarding)

A1. Sign Up — create firm workspace

What: New account + firm workspace. Full name, work email, firm name, password (≥10 chars, upper/lower/number/special, strength meter). **Navigate:** Go to `/signup` → fill fields → **Create workspace** → if a session returns you land on `/onboarding`, otherwise "Check your email to verify." **Use cases:** A boutique PE founder creating the firm's workspace; a solo dealmaker starting a trial.

A2. Login (+ MFA)

What: Email/password sign-in, "Remember me", friendly error mapping. If a TOTP factor exists, a 6-digit MFA step appears. SSO button is a placeholder (`PARTIAL` no-op). **Navigate:** `/login` → **Sign In** → (if MFA) enter code → **Verify Code** → `/dashboard`. **Use cases:** Daily partner sign-in with authenticator code; "Remember me" on a work laptop.

A3. Verify Email

What: Auto-verifies via email link (`token_hash`); success auto-redirects to `/login` after 5s. Manual OTP entry + resend (60s cooldown) fallback. **Navigate:** Click the email link → auto-verify → **Continue to Login**; or enter code manually; or **Resend**. **Use cases:** New signup confirming inbox; requesting a fresh link after expiry.

A4. Forgot / Reset Password

What: Request a reset email, then set a new password (strength-checked, must differ from old). **Navigate:** `/forgot-password` → **Send Reset Link** → open email → `/reset-password` → **Update Password** → `/login`. **Use cases:** Partner locked out before an IC meeting; forced rotation after a security event.

A5. Accept Invitation (external join)

What: Public token-verified flow showing firm/inviter/role; invitee sets name + password → account created and scoped to the inviting org; admins notified. **Navigate:** Open `/accept-invite?token=...` from the invite email → **Create Account & Join** → **Go to Login** (or auto-redirect to `/dashboard`). **Use cases:** Newly-hired analyst joining the firm workspace; external co-investor accepting view access.

A6. `AI` `VIDEO` Guided Onboarding (3 tasks)

What: A standalone 3-step flow (no app chrome) that gets a firm to first value in <3 min. Includes the **AI firm-research agent** and first-deal AI analysis. **Navigate:**

- Land on `/onboarding` → **Let's go** (or **Use a sample deal** to preload "Luktara Industries").
- Task 1 — Define your investment focus:** type your firm website (or paste LinkedIn) and blur the field → `AI` AI researches the firm ("scanning website, searching news & deals...") → **"Profile researched"** card → **Use this profile** (auto-fills AUM + sectors). A Phase-2 deep-research runs in the background (polls up to ~90s). Pick fund size + sectors → save.
- Task 2 — Upload your first deal:** drag a CIM/teaser (PDF/XLSX/DOCX ≤50MB) or pick a sample (Luktara — 11 pre-seeded red flags; or Pinecrest Dermatology).
- Task 3 — Invite your team** (optional): add email/role rows → **Mark as done**.
- Completion:** `AI` runs risk analysis on the newest deal and shows up to 5 findings ("Your AI analyst found N things on your deal") → **Open your deal**.

Loom: This is the flagship first-run experience — record it end to end (website → AI firm profile → CIM upload → red flags). *Rate limit: 3 firm-enrichment runs/hour per org.* **Use cases:** A new firm auto-builds its investment thesis so all downstream AI is house-tailored; an evaluator uses the Luktara demo to see red-flag detection without real data.

A7. Onboarding Checklist (dashboard nudge)

What: A persistent "Getting Started" card on the dashboard (5 steps: create deal, upload CIM, review AI financials, try Deal Chat, invite teammate) that auto-completes from activity and can be dismissed. **Navigate:** `/dashboard` (top of page) → click a step to jump to it, or **X** to dismiss. **Use cases:** Nudging a new analyst toward first upload and Deal Chat.

B. Dashboard

B1. VIDEO Customizable widget dashboard

What: Personalized home screen. Core widgets render inline; optional widgets are a draggable grid. Layout persists per-user. **Navigate:** `/dashboard` → bottom action bar → **Add Widget** (pick visible widgets) or **Customize Dashboard** (drag by the handle) → **Done** / `Esc` to save.

Loom: Short clip showing add-widget + drag-reorder + save. **Use cases:** A partner surfaces "Active Priorities" + "AI Deal Signals" and hides "Market Multiples"; a firm sets a standard layout for new hires.

B2. Core widgets — Pipeline Stats / Active Priorities / Portfolio Allocation

What: Pipeline Stats cards (Sourcing/DD/LOI/Closed + total closed \$, click for stage detail); Active Priorities (top-5 deals table, **View All** → `/deals`); Portfolio Allocation donut by industry. **Navigate:** `/dashboard` → click a stat card for the stage-detail modal; click any priority row → `/deals/[id]`. **Use cases:** Morning standup scan of highest-priority deals; checking sector concentration before adding another deal.

B3. AI VIDEO AI Deal Signals

What: AI scans all active deals for actionable events (leadership change, financial event, market shift, competitive threat, regulatory change, growth opportunity, risk escalation, milestone approaching), each with a severity and a suggested action. **Navigate:** `/dashboard` → "AI Deal Signals" widget → **Scan Signals** (radar icon) → results sorted critical→info.

Loom: Great demo moment — run a scan and walk through a critical signal + suggested action. **Use cases:** Weekly portfolio risk sweep; catching a leadership change on a target mid-DD; spotting an approaching LOI expiry.

B4. My Tasks / Upcoming Deadlines / This Week

What: Task checklist with priority + due-date coloring (checkbox toggles status); deadlines due within 14 days; a 7-day calendar of tasks + close dates. **Navigate:** `/dashboard` → tick a task to complete it; **View All Tasks** opens the tasks modal. **Use cases:** Associate ticks off "Send NDA" and jumps to the linked deal; partner sees what's due this week.

B5. Watchlist — track pre-pipeline targets

What: Track companies you're monitoring but haven't formally sourced (name, industry, notes). **Navigate:** Enable the Watchlist widget via Customize → widget header **Add** → fill Company/Industry/Notes → **Add**; hover a row → trash to remove. **Use cases:** Park a not-yet-actionable target ("founder-owned, revisit in 6 months"); build a thematic roll-up list before sourcing.

B6. AI PARTIAL Market Sentiment

What: AI sentiment read (BULLISH/NEUTRAL/BEARISH + indicators + recommendation) derived from the firm's active-deal sectors. Backend live; widget currently marked "Coming Soon". **Use cases:** (When surfaced) a daily sentiment read for the IC meeting.

C. Deals & Pipeline

C1. VIDEO Deal Pipeline (List + Kanban)

What: The main deals screen — every deal as a card in a **List View** or a drag-and-drop **Kanban** by stage. Stages: Initial Review → Due Diligence → IOI → LOI → Negotiation → Closing (+ Passed / Closed Won / Closed Lost). **Navigate:** `/deals` ("Deal Pipeline"). Filter bar: **Stage / Industry / Deal Size / Priority** + **Clear**. Right: List/Kanban toggle, **Customize Metrics** (which financials show on cards), **Sort by** (Recent Activity, Deal Size, IRR, Revenue, Priority...). Search is debounced. In Kanban, drag a card between columns to change stage. Click a card → `/deals/[id]`.

Loom: Show List↔Kanban toggle, filtering, and a drag-to-restage. **Use cases:** Partner filters to "Due Diligence + Software" to prep a review; associate drags IOI→LOI after a term sheet; sort by "IRR (High)" for an IC shortlist.

C2. Bulk actions

What: Multi-select deals for batch operations. **Navigate:** `/deals` → tick card checkboxes → **BulkActionsBar** → **Change Stage** / **Export** (CSV) / **Mark as Passed** / **Delete**; `Esc` clears. **Use cases:** End-of-quarter cleanup ("Mark as Passed" on 8 stale deals); export a filtered

set to CSV for an LP.

C3. AI VIDEO Deal Intake — AI create / enrich

What: AI-powered deal creation. Upload a document or paste text; AI extracts company, industry, revenue, EBITDA, currency, summary, risks, highlights, creates/updates the deal, then generates clarifying follow-up questions. **Navigate:**

1. Open the **Import Deals** button on `/deals` (also from header CTA, ⌘K, dashboard quick actions), or go to `/deal-intake`.
2. Choose **New** vs **Existing** deal → tab **File** (drag/drop, 50MB) or **Text** (paste, pick source type).
3. **Create Deal** → "Extracting deal data... AI is analyzing the content."
4. Review the extraction → answer **AI follow-up questions** → **Save & View Deal** (or **Skip**).

Loom: CIM PDF → auto-extracted deal card → follow-up questions is a strong demo. **Note:** A CSV/Excel **bulk import** exists at the API level (`deal-import.ts`), 500-row cap, dedup, auto-creates companies) but has **no dedicated column-mapping UI** in the current app; deal creation goes through the AI ingest modal. There is **no HubSpot import** in the current (web-next) product. **Use cases:** Drop a 40-page CIM → deal auto-created in seconds; paste an inbound broker email to spin up a sourcing record.

C4. Deal Detail workspace

What: Full deal workspace — header bar + resizable two-column body (left = content, right = AI chat). Tabs: **Overview / Documents / Activity**. **Navigate:** `/deals/[id]`. Header: breadcrumb, team avatar stack (→ Manage Team), **Data Room** link, copy-share-link, **Edit Deal**. Stage pipeline chips are clickable. Left tabs: Overview (summary + activity), Documents (drag-drop upload), Activity (full log). Drag the center divider to resize; double-click to reset. **Use cases:** Deal lead moves a deal to "Negotiation" and copies the share link into Slack; associate uploads a QoE report to the Documents tab.

C5. Stage lifecycle + Edit / Delete deal

What: Edit fields; move stages with an optional note; close to a terminal state (Won/Lost/Passed); delete (cascades to data-room files, docs, team — ROLE `DEAL_DELETE`). **Navigate:** **Edit Deal** (header) → save; click a stage chip → **Stage Change** modal (+ note); **Close Deal** → **Terminal Stage** modal; **Delete** → confirm. **Use cases:** Mark a deal **Closed Won** at signing, or **Passed** with a note ("valuation too high").

C6. ROLE Deal Team management

What: Assign org users to a deal with roles **Lead Partner / Analyst / Viewer**. Setting a Lead updates `assignedTo`; changes are logged and the added user is notified. **Navigate:** Deal page → click the team avatar stack / + → **Manage Deal Team** → adjust role dropdowns or remove; **Add Team Member** → search users → pick role → **Add to Team**. **Use cases:** Staff a new mandate (self as Lead, two associates as Analysts); grant a Viewer role to an operating partner during DD.

D. Deal Workspace — AI Analysis

D1. AI VIDEO Financial Statements (AI extraction)

What: Runs an AI financial agent over uploaded documents to build a normalized **3-statement model** (Income Statement, Balance Sheet, Cash Flow) with per-period line items, confidence scores, and detected currency/scale. Renders tables + charts. **Navigate:** `/deals/[id]` → **Financial Statements** card. Empty → **Extract Financials** (progress cycles "reading file → analyzing data → almost done"). Populated → tabs per statement, chart toggles (**Revenue / Growth / Composition**), period filter (**all / annual / quarterly**), **Re-extract**, confidence badge.

Loom: Upload a messy PDF P&L → clean charted 3-statement model in ~60s. **Use cases:** Turn a 120-page CIM into a clean 3-year P&L; ingest a QuickBooks CSV + bank statement to reconcile cash.

D2. Validation Flags + Conflict Resolution

What: Deterministic accounting-integrity checks (balance-sheet balancing, cash-flow ties, low-confidence periods) surfaced as amber/red warnings; when the same period is extracted from multiple docs with >2% variance, a **Conflict Banner** offers pick-a-version or **Auto-Resolve** (highest-confidence / latest-document). **Navigate:** `/deals/[id]` → Financial Statements card → Validation panel + Conflict banner appear automatically. **Use cases:** Catch a non-balancing balance sheet before IC; resolve a CIM-vs-audited revenue conflict to the audited figure.

D3. AI VIDEO AI Financial Analysis (QoE, LBO, ratios)

What: Collapsible panel with a **QoE score badge** (X/100) and seven tabs: **Overview, Deep Dive, Cash & Capital, Valuation, Diligence, AI Insights, Memo** — ratios, revenue quality/CAGR, cash-flow conversion, debt capacity, and an LBO screen (entry/exit multiples, MOIC, IRR).

Navigate: `/deals/[id]` → **AI Financial Analysis** card (blue border) → click tabs; expand to fullscreen.

Loom: Walk the QoE badge → Deep Dive → Valuation (LBO returns). **Use cases:** Screen LBO returns at 4× leverage before spending diligence hours; check EBITDA-to-FCF conversion for earnings quality.

D4. AI VIDEO **AI Narrative Insights + Benchmarking**

What: LLM-generated Executive Summary, Key Strengths, Key Risks, Investment Thesis, and DD Priorities — informed by **firm agent memory** (industry benchmarks + portfolio comparables). A benchmark view ranks the deal's revenue/EBITDA/gross-margin against org peers by percentile. **Navigate:** `/deals/[id]` → AI Financial Analysis → **AI Insights** tab; **Regenerate** after re-extraction; benchmarks live under the Valuation tab.

Loom: Show auto-drafted risks/thesis + a benchmark percentile. **Use cases:** Auto-draft "key risks" bullets for an IC pre-read; benchmark a SaaS target's margin against the existing portfolio.

D5. AI VIDEO **Deal Assistant AI (chat agent)**

What: The flagship AI feature — an always-visible right-panel **ReAct agent** scoped to the deal, grounded in the deal's metadata, extracted financials, team, and the firm's investment profile. It can **call tools and take actions** on the deal. **Navigate:** `/deals/[id]` → right panel **"Deal Assistant AI" (Beta)**. Personalized suggestion chips (e.g. "Risks in {industry}", "Build investment thesis", "Due diligence questions", "Summarize all documents"). Type a question, **Enter** to send; **attach_file** to add a doc mid-chat. Replies render Markdown with **Helpful/Copy** and **artifact action buttons** (create memo, open data room, view financials, change stage). Clear-history and settings controls in the header. **Agent tools:** `add_note`, `change_deal_stage`, `draft_email`, `get_analysis_summary`, `generate_meeting_prep`, `compare_deals`, `list/search_documents`, `get_deal_financials`, `get_deal_activity`, `trigger_financial_extraction`, `update_deal_field`, `suggest_action`, `scroll_to_section`.

Loom: Highest-value recording — ask it to "change stage to LOI and add a note", "draft 10 DD questions", "compare this to our other software deals". **Use cases:** Draft categorized DD questions; compare a deal to portfolio comps during triage; have the agent restage a deal and log the note; generate meeting prep for a management call.

E. Data Room / VDR

E1. ROLE **Data Rooms overview + Create data room**

What: A grid of every deal's data room (name, industry, stage badge, last-updated). "Create Data Room" spins up a new deal that auto-provisions default DD folders. **Navigate:** `/data-room` → **Create Data Room** → enter a name ("e.g., Project Apollo") → **Create Data Room** → routes to `/data-room/{id}`. (ROLE Associate+; a 403 shows "You need Associate role or higher...") **Use cases:** Spin up "Project Apollo" when a CIM lands; browse all live diligence rooms from one screen.

E2. VIDEO **Deal data room (3-pane workspace)**

What: The working VDR for one deal — left folder sidebar, center file table with search/filters, right AI insights panel. **Navigate:** `/data-room/[dealId]`. Left: **All Data Rooms** back link, folder tree, **New Folder**. Center: breadcrumb, **Upload Files**, team avatars, filter bars, file table. Right: **AI Quick Insights** (collapsible).

Loom: Orient viewers to the 3-pane layout before deeper VDR clips.

E3. AI VIDEO **Upload documents (+ auto-merge financials)**

What: Upload PDF/Excel/Word into a folder. Server extracts text, runs AI extraction on PDFs, RAG-embeds content, and can **auto-merge** extracted financials into the deal. **Navigate:** Select a folder → **Upload Files** (`.pdf/.xlsx/.xls/.doc/.docx`, 50MB max) → stage-2 modal lists files; if a PDF, a checkbox **"Auto-update deal with extracted data"** appears (auto-checked for CIM/financials/teaser) → **Upload**.

Loom: Drop a CIM → watch it auto-populate the deal card. **Use cases:** Auto-populate revenue/EBITDA/industry from a CIM; bulk-load a QoE Excel into "100 Financials"; file signed NDAs into Legal.

E4. Folder organization (DD structure)

What: Manage the folder hierarchy; each folder shows a readiness badge (Ready/Attention/Reviewing/Restricted) + file count. New deals auto-get a 5-folder DD structure: **100 Financials**, **200 Legal**, **300 Commercial**, **400 HR & Data**, **500 Intellectual Property**. **Navigate:** Click a folder to select; hover → : → **Rename** / **Delete**. **New Folder** (bottom) → name → **Create Folder**. Delete warns on cascade if the folder has files. **Use cases:** Add a "Tax Documents" subfolder mid-DD; rename folders to match the seller's index.

E5. AI File table — open, rename, delete, re-analyze

What: Central file table (Name, AI Analysis state, Author, Date). Row-click opens the file via a 1-hour signed URL in a new tab. **Navigate:** Row : → Rename / Download / **Link to Deal** / **Extract Financials** (Excel/PDF) / Delete. Inline **Re-analyze** (refresh) re-extracts text + re-embeds for RAG. **Use cases:** Open a management deck for review; re-analyze a file uploaded before extraction ran.

E6. Link document to another deal

What: Copies a document (same storage file) into another deal's room, optionally merging its extracted data into the target deal. **Navigate:** Row : → **Link to Deal** → search deals → pick one → linked (target team notified). **Use cases:** Share a master NDA across two bolt-on deals; move a company deck from a screening deal into the live acquisition.

E7. AI Extract financials from a document

What: Runs AI over an Excel/PDF to parse structured financial periods onto the deal. **Navigate:** Row : → **Extract Financials** → "Extracting... 30–90s" → "N period(s) stored". **Use cases:** Pull 3-year revenue/EBITDA from a QoE workbook; normalize a seller's model into the CRM schema.

E8. AI VIDEO AI Folder Insights

What: Per-folder AI analysis: **completeness** %, summary, **red flags** (severity + link to the offending file), and a **missing-documents** list. Drives the folder's readiness badge. **Navigate:** Right panel **AI Quick Insights** → **Generate AI Insights** → completeness bar + red flags (**View File**) + missing docs (**Request**). Header refresh re-runs.

Loom: Generate insights on "100 Financials" → red flag → missing-doc request. **Use cases:** Confirm "100 Financials" is 85% ready before IC; surface a missing audited statement; get a per-workstream gap list.

E9. Request missing document

What: Requests a flagged missing document — emails the deal team + posts an in-app notification. **Navigate:** Insights panel → Missing Documents → **Request** next to an item. **Use cases:** Chase an audited-financials PDF; nudge for a customer contract or org chart.

E10. Generate full folder report (Markdown)

What: Downloads a Markdown VDR report for the active folder (summary, completion %, red flags, missing docs, per-file list). **Navigate:** Insights panel footer → **Generate Full Report** → downloads `VDR_Report_{folder}_{timestamp}.md`. **Use cases:** Attach a folder-readiness report to an IC memo; share a diligence snapshot with a co-investor.

E11. Search + smart filters

What: Cross-folder search (name/content/tags) + toggleable smart-filter chips (PDFs Only, Spreadsheets, AI Warnings, Last 30 Days) and custom presets; plus a type/folder/sort bar. **Navigate:** Search box (⌘K hint) → "Searching across all folders"; toggle smart chips; **Custom** → add presets; second bar for Type/Folder/Sort. **Use cases:** Find every "AI Warnings" file before a risk review; view all Excels last 7 days; locate a contract by name across folders.

F. AI Reports — Memo Builder & Templates

F1. ROLE Create memo (deal-bound)

What: Create an IC memo bound to a deal (required — AI reads the deal's financials/docs), optionally seeded from a template. **Navigate:** `/memo-builder` → **New Memo** → Title + **Deal** (required) + **Template** (optional) → **Create Memo**. Can arrive pre-filled via `?dealId=` or from a template's "Use Template". **Use cases:** Start an IC memo from a "SaaS Growth Equity" template; auto-create when redirected from deal chat.

F2. AI VIDEO Generate All sections

What: Runs the memo agent across every section, filling content (plus tables/charts) from deal financials + documents. **Navigate:** Open a memo → header **Generate All** (auto_awesome). Requires a deal attached (otherwise an amber "Attach a deal to enable AI generation" pill).

Loom: One-click full first-draft memo from extracted financials. **Use cases:** One-click IC memo draft; regenerate the whole memo after new documents land.

F3. AI Per-section AI generate / regenerate

What: Generate/regenerate a single section with a senior-analyst prompt (HTML output with [Source: CIM p.XX] citations); supports a custom prompt. **Navigate:** In the canvas, hover a section → **Regenerate with AI**; empty sections show **Generate content with AI**. **Use cases:** Rewrite just "Risk Assessment"; regenerate "Financial Performance" after re-extraction without touching hand-edited sections.

F4. Section management (add / edit / reorder)

What: Manually manage memo structure (12 section types incl. Custom), optionally AI-generating a new section on add. **Navigate:** Outline sidebar → **Add Section** (type, title, "Generate with AI" checkbox). Per section: **Edit content** (HTML + Preview), **Save**, **Delete**; drag to reorder. **Use cases:** Add a bespoke "Management Assessment"; reorder Recommendation last; delete an irrelevant Appendix.

F5. AI VIDEO AI Analyst chat

What: A ReAct chat agent that answers questions and proposes section edits/tables/charts applied back into the document (with undo). History persists. **Navigate:** Right panel **AI Analyst**. Prompt chips: **Rewrite for Tone**, **Add EBITDA Bridge**, **Revenue Growth**, **Summarize Risks**, **Add Competitors**. Ask → review preview → confirm to append/prepend/replace.

Loom: "Add an EBITDA bridge" → insert generated table into Financial Performance. **Use cases:** Insert an EBITDA bridge; summarize risks with severity ratings; rewrite a section in formal IC tone.

F6. Export (PDF / Markdown / Clipboard / Share)

What: Export the assembled memo. **Navigate:** Header **Export to PDF** split button → **PDF / Markdown / Copy to Clipboard**; separate **Share**. **Use cases:** Export the final IC memo for the committee packet; copy markdown into an email.

F7. VIDEO Templates library + editor

What: Firm-wide template manager. Categories: **Investment Memos / Diligence Checklists / Outreach Sequences**. Editor manages sections (with AI-enabled/mandatory flags), category, and permissions (Firm-Wide / Partners Only / Analysts Only). "Use Template" launches the Memo Builder seeded from it. **Navigate:** /templates → category tabs, filter/sort/search → **New Template** (name/category/description) or select a card → editor drawer (**Add Section**, reorder, **Template Settings**, **Active** toggle) → **Preview / Use Template / Save Changes**. Card : → Duplicate / Delete (ROLE MEMO_DELETE).

Loom: Create a template → add a mandatory AI-enabled section → Use Template → memo pre-seeded. **Use cases:** Standardize the firm's IC memo structure; clone for a sector-specific variant; mark which sections auto-generate with AI.

G. CRM (Contacts)

G1. Contacts directory

What: Firm-wide contact directory. Cards show type badge (Banker/Advisor/Executive/LP/Legal/Other), company, email/phone, tags, last-contacted, a **relationship Score** chip, and linked-deal count. **Navigate:** /contacts. **Search** (debounced); **All Types** filter; **Sort** (Newest, Name, Company, Last Contacted); grid/list toggle; **Load More** (30/page). **More** → **Group by Company** reorganizes into per-company sections. **Use cases:** Filter Bankers by "Last Contacted" to spot cold coverage; sort LPs by Score before a raise; search a target to pull all its contacts.

G2. AI Add / Edit contact

What: Modal form (name, email, phone, title, company, type, LinkedIn, tags, notes). On **create**, a background AI enrichment agent runs (non-blocking) if an LLM is available. **Navigate:** /contacts → **Add Contact** → fill → **Save Contact**. Edit via detail panel → **Edit** → **Update Contact**. **Use cases:** Add a banker met at a conference with tags; update an executive's title/company on a move.

G3. Relationship Score & Network insights

What: A heuristic (non-LLM) relationship-strength score (0–100 from recency, frequency, linked deals) labeled Cold/Warm/Active/Strong. Backend also exposes timeline, duplicates, stale contacts, and a network "most-connected" view. (**PARTIAL** On-page insight cards beyond the Score are currently stubbed; the endpoints are live.) **Navigate:** Score chip shows on each card and in the detail panel's Interaction Stats. **Use cases:** Build a re-engagement list of dormant intermediaries; find the super-connector for warm intros; de-dupe before a relationship review.

G4. Contact detail panel

What: Right slide-over with full profile: clickable email/tel/LinkedIn, tags, connections, notes, linked deals, interaction stats + timeline. Action bar: **Add Note / Link Deal / Edit / Delete**. **Navigate:** `/contacts` → click any card/row. **Use cases:** Review every logged call before a management presentation; quick-reach an advisor mid-negotiation.

G5. Interaction logging

What: Log NOTE / MEETING / CALL / EMAIL / OTHER against a contact; logging updates `lastContactedAt` (which feeds the Score). (Deal-level activities with @-mentions are logged separately on deals.) **Navigate:** Detail panel → **Add Note** → type/date/title/description → **Save** → appears in the Interaction Timeline. **Use cases:** Log a diligence call with a target CFO (bumping their Score); track cadence with a key banker.

G6. **VIDEO** Connections / relationship mapping

What: Build a bidirectional relationship graph between contacts — **Knows / Referred by / Reports to / Colleague / Introduced by** — with optional notes. Feeds the network "most-connected" ranking. **Navigate:** Detail panel → **Connections** → **Add** → search a contact → pick relationship type → optional note → **Add Connection**.

Loom: Show mapping a warm-intro path (e.g. board member "Introduced by" your banker). **Use cases:** Map the warm-intro path to a target board member; model advisor clusters at a bank; track "Referred by" chains for sourcing credit.

G7. Deal linking

What: Link a contact to deals with a role (Banker / Advisor / Board Member / Management / Other). Linked deals show the deal's stage badge; count feeds the Score. **Navigate:** Detail panel → **Link Deal** → search deals → pick → choose role → **Link Deal**. Unlink via the link-off icon. **Use cases:** Link the sell-side banker to a live deal so the team sees coverage; attach target management across deals.

G8. CSV import / export

What: Bulk import (3-step wizard, flexible header mapping, ≤500 rows, per-row success/fail) and export the filtered directory to CSV. **Navigate:** **More** → **Import from CSV** (upload → preview → **Import All** → Done); **More** → **Export to CSV** (honors current filters). **Use cases:** Import a conference attendee list; export the filtered LP list for IR.

G9. **AI** **VIDEO** AI Contact Enrichment agent

What: A LangGraph agent that enriches a contact using **only the firm's own data** (no fabricated external data): searches CRM documents for mentions, analyzes the email domain, checks linked deals + relationship proximity, and synthesizes a profile — title, company, industry, bio, expertise, **dealRelevance** (high/med/low), **confidence**, a **keyInsight** ("why this person matters + what to do next"), and a **suggestedAction**. Only fills empty fields; low-confidence routes to review. **Navigate:** Runs **automatically in the background** when a contact is created (no explicit button in the contacts UI).

Loom: Add a contact seen in a data-room doc → show the enriched keyInsight + suggested action appearing. **Use cases:** A contact found in a data-room doc gets recognized, tagged high-relevance, with "Schedule intro call"; a bulk-imported banker gets coverage/expertise inferred for outreach prioritization.

H. Admin, Team & Settings

H1. **ROLE** **VIDEO** Admin Command Center

What: Team-performance + deal-flow control center. Stat cards (Team, Deal Volume, Overdue, Utilization), quick actions (**Assign Deal**, **Create Task**, **Schedule Review**, **Send Reminder**), Resource Allocation, a filterable Task Table, Upcoming Reviews. **ROLE** Admin/Partner/Principal (others see Access Denied). **Navigate:** `/admin` → click a stat card to scroll to its section; use quick-action buttons for modals.

Loom: Walk the stat cards + assign-a-deal-with-task flow. **Use cases:** Review analyst utilization at Monday standup; assign a newly-sourced deal with a Friday QoE task; spot overdue diligence before IC.

H2. ROLE Team Activity feed + Audit CSV export

What: Right-rail audit feed grouped by day (actor initials, AI badge, humanized action), with date/action/resource filters and **Export CSV** (org-scoped, up to 50k rows). **Navigate:** `/admin` → **Team Activity** → adjust filters → **Export CSV**. **Use cases:** Export a 90-day audit trail for an LP/SOC 2 auditor; investigate who downloaded a sensitive CIM.

H3. ROLE Team & Invitations

What: List invitations (email, role, status, **Copy Link**) and invite colleagues single or **bulk via CSV**. Roles: Analyst / Associate / Admin; per-invite workspace (deal) assignment; only admins invite admins. **Navigate:** `/settings` → **Team** section → **Invite Team Member** → add rows (email/role/workspaces) or **Bulk import via CSV** → **Send Invitations**. **Use cases:** Onboard three associates at once with pre-assigned workspaces; invite an external advisor as view-only to one deal.

H4. Profile & Notification preferences

What: Edit display name, title, avatar (email/firm read-only); toggle which event types generate notifications (Deal Updates, Documents, Mentions, AI Insights, Tasks, Comments). **Navigate:** `/settings` → **General** (edit + **Save Changes**) → **Notifications** (toggles + Save). **Use cases:** Update a title after promotion; a partner mutes "Document Uploads" but keeps "Mentions".

H5. AI Firm Profile (AI-researched)

What: AI-researched firm profile (description, HQ, AUM, investment/sector focus, deal size, notable deals) used as shared context across deal AI. Read-only display + refresh. **Navigate:** `/settings` → **Firm Profile** → **Refresh profile** → "Researching your firm (15–25s)..." → reloads. **Use cases:** Generate house context so memos/analysis are tailored; refresh after the mandate changes.

H6. Security — password, MFA, sessions

What: Change password (strength-checked); enroll/disable **TOTP 2FA** (QR + 6-digit verify); view and revoke **active sessions** (device/IP/last-active, "This device" badge). **Navigate:** `/settings` → **Security** → Change Password / **Enable 2FA** (scan QR → Verify & Enable) / **Sign out** any session. **Use cases:** Rotate a password after a phishing scare; enable 2FA before an IC meeting; revoke a session left on a hotel PC.

H7. ROLE VIDEO Trust posture + Tenant-isolation live test

What: A trust/compliance panel: org name + Organization ID (isolation proof), encryption checklist (AES-256, TLS 1.2+, JWT), a tenant-isolation badge, and actions (**Security Overview PDF**, **Sub-processor list**, **Request DPA**). Admins get a **live isolation test** that seeds a shadow org and runs ~8 cross-org checks proving each is BLOCKED (writes a `SECURITY_TEST_RUN` audit event). **Navigate:** `/settings` → **Security** → trust panel; admins → **Run Isolation Test** → terminal-style BLOCKED ✓ output (<3s).

Loom: Strong security-diligence demo — run the live isolation test on-screen. **Use cases:** Run a live isolation proof during an LP security-DD call; generate SOC 2 audit evidence; forward the Security Overview PDF to a skeptical LP.

H8. ROLE Require-MFA org policy

What: Admin toggle for org-wide `requireMFA`; when on, members without 2FA get a 403 and are bounced to enroll. Writes WARNING-severity audit events. **Navigate:** `/settings` → **Team & Invitations** (admin-only, bottom) → **Require Two-Factor Authentication** → confirm. **Use cases:** Mandate 2FA ahead of a fundraiser; enforce MFA before granting data-room access.

H9. AI Usage (personal credits)

What: The current user's credits used this month + per-operation breakdown (free during beta; soft reference bar, no hard cap). **Navigate:** `/settings` → **AI Usage** section. **Use cases:** Gauge how heavily the team leans on AI; see which AI operations you use most.

H10. PARTIAL Internal AI usage console (staff only)

What: Cross-org AI telemetry for internal staff (`isInternal`; non-internal get 404). Tabs: **Live Feed** (per-event tokens/cost/status), **User Leaderboard** (spend ranking + throttle/block), **Cost Breakdown** (daily cost by operation + reconciliation). **Navigate:** `/internal/usage`. **Use cases:** Debug a spike in failed extractions; throttle a runaway account; reconcile provider spend vs credit pricing.

I. Global / Cross-App

11. VIDEO Command Palette (⌘K)

What: Fast navigator/actions — jump to pages (role-filtered), deals, and contacts, plus verb actions. **Navigate:** Press ⌘K anywhere → type to filter → Enter.

Loom: Quick clip — ⌘K → jump to a deal → run an action. **Use cases:** Jump straight to a deal by name; trigger "New Deal" without leaving the keyboard.

12. AI VIDEO Context-aware AI Assistant

What: A global assistant that adapts its suggested prompts to where you are — **deal** (risks, financial health, thesis, DD questions), **portfolio** (top performers, risks, pipeline velocity), **contacts** (follow-ups, network insights, intros), and **memo** (improve writing, sanity-check facts, counterargument). **Navigate:** Open the assistant from the app chrome → pick a context-appropriate prompt chip or type freely.

Loom: Show the assistant changing its suggestions across deal → portfolio → contacts. **Use cases:** Ask "key risks & red flags" on a deal; "which deals need attention" across the portfolio; "draft warm outreach" for a contact.

13. Notifications (bell + slide-out center)

What: Header **bell** (unread badge, 30s poll, opening marks first unread as read, **Mark all read**) and a full **slide-out center** with **All / Unread / Mentions** tabs, time-grouped rows, per-row dismiss, and deep-links to deals. Types: Deal, Document, Mention, AI Insight, Task, Comment, System, Stage, Financial, Invite. **Navigate:** Click the bell → dropdown → click a row to jump to its deal; open the center → filter tabs → dismiss / **Mark all as read**. **Use cases:** Jump from a "task assigned" straight to the deal; filter **Mentions** to see where you were @-tagged; catch up on "This Week" after travel.

14. AI VIDEO Portfolio Chat (ask across all deals)

What: A ReAct agent over the whole portfolio with tools: `get_portfolio_summary` (counts, revenue/EBITDA, avg IRR, breakdowns), `get_deal_details` (with extracted financials), `get_pipeline_analysis` (stage distribution, conversion). Cites specific numbers and explains *why* a deal needs attention; returns related deals. **Navigate:** Portfolio/dashboard AI entry → ask e.g. "Which deals need attention?"

Loom: Ask a portfolio-level question and show it citing real numbers + linking deals. **Use cases:** "Which deals need attention?" surfaces stalled/low-metric deals; "average projected IRR and total EBITDA?"; "compare Luktara vs Pinecrest on revenue and stage."

Part 3 — Loom Video Checklist

Record these walkthroughs (ordered by demo/onboarding value). ★ = highest priority.

Loom	Feature	Why record it	Rough length
★ 1	A6 — Guided Onboarding (website → AI firm profile → CIM upload → red flags)	The flagship first-run "aha" moment	3–4 min
★ 2	D5 — Deal Assistant AI (ask, then have it restage + add note, draft DD questions)	Shows the agent <i>taking actions</i> , not just chatting	3–4 min
★ 3	C3 — Deal Intake (CIM PDF → auto-extracted deal + follow-up questions)	Core "AI does the data entry" wow	2–3 min
★ 4	D1 + D3 + D4 — Financials → AI Analysis → Insights (extract → QoE/LBO → thesis/risks)	The analytical heart of the product	4–5 min
★ 5	E3 + E8 — VDR upload + AI Folder Insights (upload → completeness/red flags → request missing)	Diligence workflow buyers care about	3–4 min
6	F2 + F5 — Memo Builder (Generate AI → AI Analyst adds an EBITDA bridge → export PDF)	End-to-end IC memo in minutes	3–4 min
7	H7 — Tenant-isolation live test + Trust posture	Wins security/LP diligence conversations	2 min
8	B3 — AI Deal Signals (Scan Signals → critical signal + action)	Proactive portfolio monitoring	1–2 min
9	I4 — Portfolio Chat ("which deals need attention?")	Portfolio-level AI over real numbers	2 min
10	G6 + G9 — Contacts connections + AI enrichment	Relationship intelligence story	2–3 min
11	F7 — Templates (create → AI-enabled section → Use Template)	Firm-wide standardization	2 min
12	C1 — Deal Pipeline (List↔Kanban, filter, drag-to-restage)	Everyday navigation basics	1–2 min
13	B1 — Dashboard customization + I1 — Command Palette (⌘K) + I2 — AI Assistant	Quick "power-user" montage	2 min
14	H1 — Admin Command Center (assign deal + task)	Manager/admin workflow	2 min

No Loom needed (self-evident forms/CRUD): Sign up / login / password reset (A1–A5), profile & notification prefs (H4), add/edit contact (G2), CSV import/export (G8), watchlist add (B5), basic file rename/delete/download (E5), invitations list (H3 list view), AI usage (H9).

Appendix — Honesty notes (current state)

These are **built but partial** in the current app — flag them accordingly in demos:

- **SSO** on login is a placeholder (no-op).
- **Deactivate account** (Settings) is a stub → shows "not available in this version".
- **Market Sentiment** dashboard widget is "Coming Soon" (backend live).
- **Contacts insight cards** beyond the relationship Score are stubbed off (endpoints live).
- **CSV/Excel bulk deal import** exists at the API level but has **no column-mapping UI**; deal creation flows through the AI ingest modal.
- **No HubSpot import** exists in the current (web-next) product. *(A legacy HubSpot import shipped in the older `apps/web` frontend; it is not part of PE OS.)*
- **Internal AI usage console** (`/internal/usage`) is staff-only tooling, not a customer feature.

All routes, labels, and behaviors above were verified against the current `apps/web-next` and `apps/api` source.
