

PE OS V2 — Frontend Verification Checklist

Immos.ai · V2 shipped 2026-08-11 (PRs #87, #96–#99) · All 4 Supabase migrations + RLS backstop applied · Est. 30–40 min

Before starting: confirm the latest production deployment is • **Ready** in Vercel (hotfixes #98 empty-betas and #99 chat JSON-fallback must be live). Test as a normal org user on **Immos.ai**.

A. Live now — no flags (core pass)

1 • Memo Generation + Rubric Grading PHASES 2-C + 3-A

- ☐ Memo Builder → memo on a deal **with extracted financials** → **Generate All**
- ☐ Sections appear **one by one** (not all at once); status cycles “Generating ... (4/12)” per section
- ☐ “**Reviewing memo quality...**” appears at the end (rubric critique); “Revising X...” only if flagged
- ☐ Refresh the page → generated sections persisted
- ☒ *Financial sections on deals without financials show the “upload documents” placeholder — correct anti-hallucination behavior, not a bug*
- ☒ Failure signatures: 400 “anthropic-beta” (fixed in #98 — must not appear) · instantly-empty sections · one big all-at-once dump (no streaming)

2 • Deal Scorecard GO / NO-GO

- ☐ Settings → **Investment Criteria** → fill sectors / size / EBITDA / thesis → Save → refresh → values persist
- ☐ Deal page → left panel → “**Score deal**” → verdict chip (GO / NO-GO / BORDERLINE · score/100), two sub-scores, reasons with ✓ / ✗ / 🚧 icons
- ☐ A NO-GO includes at least one reason tied to your criteria (“outside size range ...”)
- ☐ Deals list → scored deal shows colored **badge beside its stage chip**; unscored deals show nothing
- ☐ Scoring before criteria are set → clean “Set your investment criteria first” message with Settings link
- ☐ Run financial extraction on a scored deal → auto re-score fires afterward (refresh to see)

3 • Client Portal / Deal Sharing EXTERNAL LINKS

- ☐ Deal → : menu → “**Share Deal**” → create link (label + section toggles + expiry) → Copy works
- ☐ Open link in **incognito**: branded read-only page — overview, financials table, document **Download** works, memos render
- ☐ Back in modal: **view count incremented**, last-viewed timestamp shows
- ☐ New link with a section toggled off → that section absent from the portal page
- ☐ **Revoke** → incognito refresh → “This link is no longer active” (clean page, not an error)
- ☐ If recipient email set → the email arrived (Resend)

4 • Deal Chat — regression + history fix AFTER #99 DEPLOY

- ☐ Deal page → chat → ask a question → **a reply renders** (was silently broken until hotfix #99)

- Ask a follow-up referencing the first answer (“and its margins?”) → it has context — **conversation history is now actually sent**
 - Ask it to add a note / change stage → toast fires, activity feed updates
 - Web search / chart tools still work (main-side tools, legacy path)
- ⓘ Replies arrive as one block, not token-streaming — expected while DEAL_CHAT_ENGINE is off*

5 • Usage Ledger

- `/internal/usage` → rows for `memo_section_generation`, `memo_critique` (+ `memo_revise` if fired), `deal_scorecard` — real token counts, provider `anthropic`

B. Verify at flag-flip time (deliberately OFF today)

Flag	Before flipping	Verification when flipped
<code>EXTRACTION_ENGINE=c laude</code>	Run <code>apps/api/scripts/extraction-bakeoff.ts</code> on real docs; confirm Anthropic data-retention ≥ 30 days	Upload a CIM → extraction completes; <code>FinancialStatement.extractionSource = 'c laude'</code> ; line items carry <code>sourcePage</code> / <code>sourceQuote</code> provenance
<code>DEAL_CHAT_ENGINE=streaming</code> HOLD	Port the 4 main-side tools (web search, charts, Gmail/Calendar readers) to the streaming barrel first — see MERGE NOTE in <code>dealChatAgent/tools.ts</code>	Replies stream token-by-token with “Searching documents...” labels; closing the tab mid-answer aborts the run
<code>RESEARCH_ENGINE</code> / <code>SIGNAL_ENGINE</code>	Phase 2-B rollout: <code>ant CLI</code> environment provisioning + webhook registration + <code>CRON_SECRET</code>	Onboarding firm-enrich populates <code>firmProfile</code> via Managed Agents; nightly cron writes signal notifications

C. Looks wrong, is correct

- ⓘ Financial memo sections placeholder on data-less deals — anti-hallucination by design*
- ⓘ No scorecard badge on a deal = simply unscored yet*
- ⓘ Deal chat replies arrive as one block = engine flag off, expected*
- ⓘ Sample-deal memo sections that failed before hotfix #98 stay failed — regenerate them once*
